The new 'GibbsCAM Depth of Pocketing' option allows you to control the depth of your pocket. The default setting is 0, which allows standard pockets to be created, and maximum depth allows for pocketing through one of the vertical planks, or most of the solid core of a block. Customizable thermo-swing states make it easy to switch between Fan and Waterbed modes, and the 'Save Thermo-swings As' and 'Load Thermo-swings As' functions allow multiple sets of thermo-swings to be saved and loaded, even for different runs and projects. GibbsCAM 2012+ software was created by Gibbs, and is continually being upgraded and improved by Gibbs. For more information, check out the Gibbs website. For our further info, please contact support@gibbscam.com. As always, this guide is just a guideline. If you want to turn your cabinetry into a giant block of butter, you can. If you want it to have some personality, there are many ways to do it. Step 1: Complete the basic design This is a little more complicated than some other projects. For starters, you need to create a 3D-model of your cabinetry. The models can be created in CAD software, but I have always found that it's easier to draw them on graph paper, then do the drawing in CAD. The planks are usually the easiest to draw, so it's best to draw them in their final sizes and place them on a flat surface so you can see the final product. The key points to remember: Ask HN: Recent HN Favorites - sant0sk1 If you don't mind sharing, any of your recent favorites on HN? ===== notahacker I've seen the same thing with Amazon. Click through HN to a very, very practical product, before maybe clicking through to the 'commenting on news.YC' section. Which by this point is pretty much the main use of HN. I'd \_love\_ a voting queue though, because many things are getting featured for one day and then quietly forgotten the next. ----- hosay123 I don't think I've ever posted on HN but I've been a subscriber for a while now. My favourites, which are 82157476af
